

DARKMETA

Welcome to DarkMeta whitepaper, the worlds first fully anonymous crypto currency wallet . As anonymity in the space becomes a growing concern and the recent success of multiple projects catering to the needs of anonymous bridges and transactions we have decided to take it a step further and provide the first fully anonymous wallet. Trade freely , cross chain without worry of wallet trackers., following phishers or colleagues knowing your business. download free, create a wallet and secure your secret pass phrase, then head over to our site and use the anonymous bridge to fund your wallet and trade freely and without a trace. Any transactions that violate the DarkMeta terms of service will result in the possible freezing of your account or a report being filed with the proper authorities. The communication between staff and investors should also serve as the front lines of security, crypto was built around personal anonymity and we plan to do our part to keep it that way.

By using a commonly used and well recognized wallet template and design we hope to give users a comfortable feeling well offering a superior service. using the sites bridge you will be able to add funds to your wallet using BNB or Ethereum but have the option to have it fund your wallet in numerous types of currency. ie you send 1bnb but specify that it will arrive in Ethereum.

the transaction from the site to wallet will show a visible withdrawl from senders wallet but its destination will be masked. Once you funds have arrive in DarkMeta you will then be able to trade freely under the radar by simply paying your own transaction fees, transfers will take a short time but be made in under 10 mins. you will be able to hold a max of 100 DarkMeta wallets per account. Min transfer is pver 0.1 bnb equivelent. max transfer is equal to 1 btc at tome of transfer.

DARKMETA

UTILITY ROADMAP

- Deploy the anonymous Bridge on the site for free use.
- Finish Wallet data and connectibility and offer active community members Beta testing.
- Deploy wallet downloadable and accessible from our site.
- Deploy on Android
- Deploy on IOS

TOKEN ROADMAP

- Build Telegram, Twitter and site while building a community.
- Run promotions and partnerships marketing the launch of DarkMeta token on the ETH chain.
- Hold AMAs and brand our business.
- Build a solid stable coin base that can grow with our utility as we grow.
